GREETINGS

To all Flower Lovers and Glad Fans:
I am happy to present my 1931-1932 list knowing you will enjoy the new varieties which have done well in my garden and which I am listing for the first time this year. The many good reports received regarding my bulbs have been most gratifying.

This list covers the most of the best varieties grown. If you would like any variety not listed herein; I want you to feel free to include in your order and I will get them for you at current prices, and send them all together.

Should any of the prices in this list appear out of line after a general publication of prices I will send additional bulbs with your order to compensate.

STANDARD SIZES OF BULBS

No. 1--1½-in. up	No. 4--¾-1 in.
No. 2--1¼-1½ in.	No. 5--½-¾ in.
No. 3--1-1¼ in.	No. 6--¼-½ in.

Abbreviations in this list are:

L—Large No. 1 and No. 2.

M—Medium No. 3 and No. 4.

S—Small No. 5 and No. 6.

Order early. There is everything to gain and nothing to lose by ordering early. If you wait too long some of the varieties you want may be sold out and that would be disappointing, so order early and get what you want when you want it.

Shipments will be made early in December to all Pacific Coast points. Later as instructed to all Eastern Points. All orders for \$1.00 or more are sent postage prepaid.

Safe delivery guaranteed.

CULTURAL SUGGESTIONS

The gladiolus is easy to grow. It will do well in almost any garden soil but a rich sandy loam is best.

Planting may be done any time after February 1st along the coast of California, Oregon or Washington and at intervals during the spring and summer as late as September. In the interior and in the east plantings may be made as early as danger of frost is past.

The depth to plant is largely dependent on the size of the bulb and the location. Three inches for small bulbs, up to five or six inches for large ones is usually the rule.

Water freely; don't just sprinkle, but give a good soaking when watering, then shallow cultivation to keep down the weeds and prevent the soil from crusting. Do not cultivate deep next to the bulbs as the small side roots will be cut if this is done.

Fertilize with some good complete fertilizer after the bulbs are up and again when the fifth leaf has formed, followed by copious watering to make the fertilizer available.

Dig the bulbs when the leaves are about two-thirds brown. Cut off the stem immediately close to the bulb, spread them out to dry, preferably outdoors where the sun and wind will soon cure them. (Shade if placed in the sun to prevent sunburn.)

After a couple of weeks they will be cured enough to remove the old bulb after which store in a cool dry place, preferably in screen bottom trays or boxes. Keep away from heat and dampness and guard against freezing if necessary.

Label all named varieties and make a record of planting for identification. When digging be sure to put the label in the tray before any bulbs are deposited to avoid mixing.

For a bouquet cut when first two florets open and take indoors, placing in water. Every morning cut off the stem and change the water. This will insure freshness until the last floret has opened.
